Colorectal Cancer Prevalance

4th

Colorectal cancer is the fourth most common cancer in the U.S.

In the U.S., about 10% of colorectal cancer cases are diagnosed in people under 50.

The number of diagnoses in people under 50 is rising about 1-2% each year.

Who is it for?

- Individuals aged 45 and older - recommended for regular colorectal cancer screening
- People with a family history of colorectal cancer
- Patients with gastrointestinal symptoms
- Those with certain medical conditions like Inflammatory Bowel Disease (IBD) which increase risk of colorectal cancer and may require regular screening
